EDUCATION

GLOBAL RECIPROCAL COLLEGE Caloocan, Metro Manila
Bachelor of Information Technology *July 2025*

EXPERIENCE

WHITE CLOAK TECHNOLOGIES INC. Ortigas, Pasig
Software Engineer *December 2025 – Current*

- Full-stack engineer in a 20-engineer Agile team building a corporate digital banking platform for a commercial bank's business clients (NestJS, TypeScript, PostgreSQL, Next.js), with ~150 unit and end-to-end test files.
- **Batch Payroll:** Built end to end, from CSV upload with per-record checks and an exceptions list, through the company's Maker-Checker-Authorizer approval, to immediate or future-dated release within a daily payroll ceiling, sent once through a disbursement adapter with idempotency keys and row-level locks.
- **Service Requests:** Built end to end: account opening and loan requests with document uploads, approved inside the company, then reviewed by bank officers in the back office (complete, return or reject). A bank timeout is marked unconfirmed and never resent.
- **Time Deposits:** Built placements and pre-termination, from a four-step wizard with an indicative rate to booking through a core banking adapter once the bank approves, locked against double pre-termination.
- **Bills Payment:** Built the customer web module with an optional Checker step, saved templates and PDF receipts, plus future-dated and recurring payments run by a scheduler job. An approval is refused if the payment changed after the approver opened it.
- **Transfers:** Added edit-and-resubmit for transfers the company's approvers send back, keeping every return in the history, and a per-user daily transfer limit checked at submission and again at final approval, set by bank staff in the back office.
- Integrated third-party government payment systems end to end (order-of-payment issuance, status polling, reconciliation of pending transactions) and secured authentication: RS256 JWT with session binding, role-based access control, concurrent-session handling, and a CVE patch for JWT assertion forgery.

CRECIENDO PHILIPPINES INCORPORATED Quezon City, Metro Manila
UI/UX Intern *January 2025 – May 2025*

- Pioneered the UI/UX design of the company's HRIS, from workflow research to wireframes, Figma prototypes and developer handoff.

PROJECTS

GALA TRAVEL APP Java 21 | Spring Boot | Spring Security | Spring Data JPA | Hibernate | Flyway

- Built layered REST services in Java 21 and Spring Boot with Spring Data JPA and Hibernate on PostgreSQL and Flyway migrations, secured with Spring Security, OAuth2 and JDBC-backed sessions.
- Integrated Google and Microsoft Calendar APIs with consent, token revocation and graceful degradation on provider failure; wrote 70+ test classes with JUnit, MockMvc and Testcontainers; containerized with Docker and added Actuator health checks.

LEADERSHIP & ACTIVITIES

EHELP — EGOVPH HACKATHON 2026 *July 2026*

- Co-led a 3-engineer team to a Top 30 finish out of 1,500+ participants, building a cross-agency government aid platform. Owned the Next.js staff workflow engine, the Flutter citizen application flow with QR disbursement, and backend health checks and PostgreSQL TLS hardening.

SKILLS

Languages: TypeScript, Java, SQL, PL/pgSQL, JavaScript, Dart
Technologies: Node.js, NestJS, TypeORM, Spring Boot, Spring Security, Spring Data JPA, Hibernate, Next.js, React, Tailwind CSS, Flutter, PostgreSQL, MongoDB, Prisma, REST APIs, Jest, Vitest, React Testing Library, JUnit, MockMvc, Testcontainers, Docker, AWS, GitLab CI/CD, Git
Fintech: payments, payroll, maker-checker, transaction limits, idempotency, core banking integration
